QA AUTOMATION ENGINEER

PROFESSIONAL PROFILE

QA Automation Engineer specialized in the development, enhancement, and maintenance of test automation frameworks and end-to-end (E2E) processes.

TECHNICAL SKILLS

Programming languages:	Java · Python · SQL
Test automation:	Selenium WebDriver · Appium · Cucumber · Gherkin · TestNG
Build / CI/CD:	Maven · Jenkins · GitLab CI · Docker
APIs / Test data:	REST · Postman · Icaria (test data setup, validation, and cleanup)
Execution / Reporting:	Selenium Grid · MOON · Allure
Version control / Management:	Git · GitHub · Jira · Confluence
Web technologies:	HTML · CSS · JavaScript · DOM
Methodologies:	Agile / Scrum · E2E · regression · smoke · integration · acceptance testing

PROFESSIONAL EXPERIENCE

MTP — QA Automation Engineer | 2022 – Present

- Develop, enhance, and maintain test automation frameworks for web applications and E2E processes.
- Design and implement new automated test cases and features based on functional requirements.
- Automate complex workflows using Selenium WebDriver and BDD scenarios with Cucumber/Gherkin.
- Develop automation structure and logic in Java and manage dependencies with Maven.
- Integrate REST APIs for queries, validations, test data setup, and cleanup.
- Develop setup and cleanup processes to prepare test resources and restore them to their initial state (Icaria).
- Configure, execute, and maintain automated tests in CI/CD environments using Jenkins and GitLab CI.
- Work with distributed execution through Selenium Grid/MOON and generate test evidence with Allure.
- Manage source code with Git/GitHub and track tasks, incidents, and maintenance activities in Jira.
- Analyze and resolve issues caused by functional or technical changes.
- Coordinate with functional teams to assess automation requests, estimate effort, and define implementation strategies.

SELECTED PROJECTS

Agents Revamp — E2E Test Automation Framework

- Develop and enhance the test automation framework for Agents Revamp.
- Java, Selenium, Cucumber/Gherkin, and distributed execution through MOON.
- Integration with Jenkins/Argos and preparation of test plans for execution.
- E2E validation and maintenance of the infrastructure required for automated execution.

MásMóvil / Orange — E2E Automation and Maintenance

- Maintain and adapt automated tests in response to functional and technical changes.
- Update XPath expressions, selectors, and automated workflows to keep tests stable.
- Prepare, validate, and clean test data through integrations and automation resources.
- Execute injection tests (Icaria), regression tests, and maintenance activities across different environments.

EDUCATION & TRAINING

- **Generative AI Workshop — MTP | 2026**

Generative AI applied to software testing, prompt engineering, test case and test data generation, requirements review, documentation, and defect reporting.

- **Prompt Engineering — MTP | 2026**

Practical application of prompting methodologies and patterns such as COSTAR, BAB, and RTF.

- **Docker — MTP | 2023**

Docker fundamentals, images and containers, Dockerfiles, image creation, volumes, networking, Docker Compose, Git and version tags, Podman, Artifact Registry, Jenkins, and Kubernetes.

- **Scrum Master — MTP | 2022**
- **Digital Business Assurance — MTP | 2022**

Java, programming fundamentals, object-oriented programming (OOP), Git, GitHub, Maven, Selenium WebDriver, Cucumber, Gherkin, test automation framework design and development, Page Object Model (POM), XPath, TestNG, Postman, RestAssured, and SQL.

- **IT Software Technician — Udemy | 2022**

Introduction to test cases, epics, Jira, TestLink, testing types, black-box and white-box testing, Postman, and introductory SQL.

ADDITIONAL KNOWLEDGE

Cypress (knowledge) · JMeter / BlazeMeter (previous experience) · SoapUI / Newman · SQL for data management and validation · software quality and code analysis tools · regression, smoke, integration, system, acceptance, and E2E testing.

LANGUAGES

Spanish: Native | **English:** B1
